

BAR MADE FROM OLD BLEACHER SEATS

In Weaverville, I found 16 ft length boards of heart pine that were salvaged from Owens High School in Black Mountain. These had been used as bleacher seats for years, and the school was renovating their gym. The boards had several layers of old paint including turquoise, orange, black, and most recently, red. I planed off enough of the old paint to leave a smooth surface and still show all the old colors. Here I made a 6 ft bar out of the boards and used metal roofing aluminum for the body. Was sold to a gal in Hendersonville who is using it in her covered patio. Quite a statement piece.

Roughly 60" long, 18" deep, 42" high. Top is roughly 1-1/2" thick.

\$350
