

PALLET AND HARDWOOD HALL TREE

At a construction site, I found a great pallet made from some long wide boards and several hewn logs for supports. I built a hall tree out of the long boards, added an oak seat and feet, used the logs for trim, and some other pallet supports for the legs. Also had some live edge maple accents for the coat hooks. That, plus a grab basket and a pine top round out this unique piece.

Roughly 48" wide, 66" high, and 18" deep. Top shelf is 9" deep.

\$395

CAUTION – This piece is heavy and should be disassembled for delivery and setup, which I will do if you pay full price. \$25 charge if delivered outside Buncombe or Henderson county.
